

# PUTTING DATA QUALITY TO WORK FOR IT Ops

TFORM provides data quality management (DQM) specifically engineered for IT Ops, providing automation and insight to optimize the delivery of IT services.

## INTUITIVE INGEST

Not all data is created equally. In addition to TFORM's out-of-the-box scanning engine, our data ingest capability from other data sources **distinguishes between types of data sources** and leverages them differently based on DQM best practices.

## SMART SCREENING

Don't waste time sifting through tons of data. TFORM **eliminates noise and delivers actionable exception reports** based on out-of-the-box best practices. In addition to automation, TFORM provides a detailed exclusion tracking framework ensuring nothing critical slips through the cracks.

## INDIVIDUALIZED INTERFACE

TFORM dashboards are personalized by role to put actionable information into the right hands. Enabling technical resources to **boost productivity by focusing on high value activity**. Executive and management summary dashboards enable leadership to quickly view team status, performance and progress.

## ADAPTABLE AUTOMATION

TFORM **goes beyond DQM automation**, providing automated exclusions, tagging, target identification and a framework that performs bulk and line-item specific automation for repetitive and common IT Ops tasks.

## TRANSFORM IT Ops

- Shift left and get more value from your resources.
- Eliminate discrepancies between IT towers and data sources.
- Get insights relevant to your role. See your team's performance at-a-glance.
- Increase efficiency and ROI by eliminating human error.
